

SENSORS WITH ANALOG OUTPUT

SENSORS WITH ANALOG OUTPUT

Classical (switching) proximity switches work internally as analog devices, although they produce a binary signal at the output. A large part of the available internal information, though, is lost. Switches with analog outputs, on the other hand, provide the user with full information, permitting a variety of possible applications.

TECHNOLOGY

As mentioned above, proximity switches already work as analog devices. However, a signal shaper before the output stage changes the rectified analog signal into a digital one. This signal shaper also exists in switches with analog outputs, but there it serves an entirely different purpose. Instead of producing a switching point, it converts the signal emitted by the rectifier into a more usable, but still analog, form. Its main purpose is the generation of defined starting and end points of the output function, as well as a defined flow in between. Such switches have been available on the market for some time. The scope of their application has, however, so far remained very small, principally due to severe limitations of their usable sensing range.

ADVANTAGES OF ANALOG TECHNOLOGY

- Very large sensing range
- Available in an economical non-linearized execution with favorable transfer function
- Low specimen scattering
- Current and voltage output in the same device (most models)

APPLICATION AREAS

Contrinex proposes a number of inductive, photoelectric and ultrasonic devices with analog output. The use of analog sensor technology permits the realization of numerous applications.

- The regulated approach to end positions at minimum cost
- The realization of several switch points with a single device
- Concentricity monitoring (Fig. 1)
- Vibration monitoring

Fig. 1

For further application possibilities, please consult the Contrinex technical notes on sensors with analog output.

INDUCTIVE ANALOG DEVICES

Contrinex inductive analog sensors use Condist® technology for particularly large sensing ranges. In addition, these devices are characterized by good switching accuracy, stability, and repeat accuracy, as well as low specimen scattering.

For most models, a voltage output (0 ... 5 V or 0 ... 10 V) and a current output (1 ... 5 mA or 4 ... 20 mA) are available simultaneously. Presently, all devices demonstrate non-linear transmission behaviour, as shown in Fig. 2 for DW-A#-509-M12.

Fig. 2

PHOTOELECTRIC ANALOG DEVICES

In order to enlarge its range of analog sensors, Contrinex now also offers photoelectric sensors with analog output. The devices feature a large sensing range, excellent temperature stability and an outstanding repeat accuracy. The sensing range is furthermore independent of the target color and surface structure. Since intermediate digitalisation has been dispensed with, the resolution of these sensors is virtually unlimited. In addition, their excellent white-gray characteristics allow for efficient background suppression.

ULTRASONIC ANALOG DEVICES

Ultrasonic proximity switches can be used as contact-free sensors in many areas of automation. They are employed wherever distances have to be measured in air, since they not only detect objects, but they can also indicate and evaluate the absolute distance between themselves and the target. Changing atmospheric conditions, such as temperature variations for instance, are compensated during the evaluation process of the measurement. The ultrasonic range includes devices with analog and switching outputs.

MAIN FEATURES

- Large usable sensing ranges
- Excellent resolution (no digitalization)
- Excellent temperature stability
- Voltage as well as current outputs in the same device (most models)
- Switch point setting by teach-in (in conjunction with a PLC)
- Rectangular version (housing 8 x 8 x 50) for easier installation in limited spaces

TECHNICAL DATA

Housing material	Chrome-plated brass
Supply voltage range U_B	10 ... 30 / 15 ... 30 VDC*
Permissible ripple content	≤ 20 %
No-load supply current	≤ 10 mA
Output voltage, damped	0 VDC
Output voltage, non-damped	5 VDC / 10 VDC*
Ambient temperature range	-25 ... +70 °C**
Temperature drift % s_t	≤ 5 % (0 ... +70 °C)
	≤ 10 % (-25 ... 0 °C)
Degree of protection	IP 67
EMC protection:	
IEC 60947-5-2	5 kV
IEC 61000-4-2	Level 2
IEC 61000-4-3	Level 3
IEC 61000-4-4	Level 2
Short-circuit protection	Built-in
Polarity reversal protection	Built-in
Power-on reset	Built-in

* DW-A#-5#9-M##-320/39#

** Depending on operating conditions, limited temperature range for DW-A#-509-M##-320/39# (see data sheets)

DOCUMENTATION

PHOTOELECTRIC ANALOG

DIFFUSE SENSORS

MAIN FEATURES

- Small housing size
- Sensing range from 10 ... 100 mm
- Excellent resolution
- Excellent temperature stability
- Voltage output of 0 ... 5 V
- Operating distance independent of target color and surface structure
- Bandwidth of 100 Hz
- Glass lens, easy to clean

TECHNICAL DATA

Housing material	Chrome-plated brass
Supply voltage range U_B	10 ... 30 VDC
Permissible ripple content	≤ 20 %
No-load supply current	≤ 25 mA
Time delay before availability	≤ 100 msec
Max. ambient light:	
halogen	5,000 Lux
sun	10,000 Lux
Ambient temperature range	0 ... +55 °C
Temperature drift % s_n	0.1 / °C
Degree of protection	IP 67
EMC protection:	
IEC 60947-5-2	1 kV
IEC 61000-4-2	Level 2
IEC 61000-4-3	Level 2
IEC 61000-4-4	Level 3

ULTRASONIC ANALOG

SENSORS

MAIN FEATURES

- Ready-to-connect compact devices
- Can be operated as diffuse or reflex sensors
- High excess gain, therefore insensitive to dirt and ambient noise
- Detection independent of target color, shape, material and surface structure
- Reduced blind zone
- Low current drain
- Adjustment by means of interface device APE-0000-001
- Fore- and background suppression
- Diffuse sensors with window function
- High degree of protection: IP 67

TECHNICAL DATA

Housing material	Nickel-plated brass
Supply voltage range U_b	12 ... 30 VDC*
Permissible ripple content	≤ 10 %
Current output	4 ... 20 mA
No-load supply current	≤ 50 mA
Time delay before availability	280 msec
Ambient temperature range	-25 ... +70 °C
Degree of protection	IP 67
EMC protection:	
IEC 61000-4-2	4 kV
IEC 61000-4-3	10 V/m
IEC 61000-4-4	2 kV
IEC 61000-4-6	10 V
EN 55011	Class B
Short-circuit protection	Built-in
Polarity reversal protection	Built-in
Power-on reset	Built-in

* At 12 ... 20 V, approx. 20 % reduced sensing range

LED

The yellow LED lights up when the output is switched. Flashing LED indicates misadjustment.

ACCESSORIES FOR ULTRASONIC SENSORS

CONPROG PC INTERFACE

For optimum adaptation to the application conditions, the parameters of all ultrasonic devices in this catalog can be programmed, visualized, checked and changed with the PC interface device APE-0000-001 and its software CONPROG. Amongst others, the following parameters can be set:

- Beginning and end of operating range
- Hysteresis
- End of sensing range
- Switching function (N.O. or N.C.)
- Beginning and end of analog characteristic curve
- Direction of analog characteristic curve (rising or falling)
- End of blind zone
- Mean value generation
- Temperature compensation
- Multiplex function
- Function as diffuse or reflex sensor
- Switching frequency
- Damping (sensitivity)

The programmed values can be stored and printed, thus simplifying the maintenance and documentation of the installation. In case several sensors need to be parametrized identically, the stored setting values can be transferred rapidly to the other sensors by means of the interface device (e.g. when connecting switches in series, or when exchanging them).

The interface device is delivered with a RS232 cable (for serial interface), a mains transformer plug, a sensor connecting cable and CONPROG PC software for Windows. Updates to the latest software version can be downloaded from the CONTRINEX website (www.contrinex.com).
